## ENERGY CONSERVATION FOR AIR CONDITIONING SYSTEM

This training is designed to provide the necessary training needed to improve energy efficiency of air-conditioning systems through enhanced operations. This training will discuss the fundamentals of the operation of various types of air-conditioning systems including the thermodynamic properties of moist air, coil load calculation and the determination of the performance indicators of air-conditioning systems. Various energy conservation measures will be discussed including strategies that will offer great energy savings. It also emphasizes on interactive, practical and experiential learning. Individual assessment will be held at the end of training.

### Learning Outcomes

At the end of the training, participants are expected to be able to:

- Describe various types of air-conditioning systems used in commercial buildings and industries;
- Explain the working operations of the basic refrigeration cycle;
- Analyse air properties using the psychrometric chart and how they relate to thermal comfort;
- Determine performance indicators for air-conditioning systems;
- Identify energy conservation measures and savings.

### Who should attend?

Building operators, maintenance personnel, energy managers and executives working in commercial buildings and industries.

### Course Outline

- Introduction and Fundamentals of Air-Conditioning Systems.
- Energy Efficiency of Air-Conditioning Systems.
- Guidelines for Energy Conservation.
- Air-Conditioning Energy Audit.
- Software Demonstration.
- Practical Sessions.
- Site Visit to VRF/VRV Air Conditioning System.
