

SOLARPACK EMBARKS ON A MEANINGFUL ESG JOURNEY WITH GREEN GROWTH ASIA FOUNDATION AND MGTC

~Empowering Two Eco-Schools in Kedah to Explore Renewable Energy and Build Environmental Awareness~

BANGI 22 February 2023: Solarpack Corporación Tecnológica S.A.U (Solarpack) has signed an agreement with Green Growth Asia Foundation (GGAF) to champion our nation's ambitious goal to achieve carbon neutrality through the Eco-Schools programme (ESP). The collaboration will see Solarpack partnering with GGAF to deliver the Eco-Schools Programme to the schools with a focus on Solar Energy, as well as contributing to the development of Solar Energy modules for the students.

The aim is to contribute to the social development of the communities in which Solarpack Suria Sungai Petani Sdn Bhd is established. The 3-year project will impact more than 400 students from SK (T) Palanisamy Kumaran and SK (T) Saraswathy.

Mr. Chan Kok Hoe, Head of South East Asia, Solarpack, shared his aspiration during the sponsorship announcement event at Malaysian Green Technology and Climate Change Corporation (MGTC) office. "This initiative highlights Solarpack's commitment to education and sustainable development. It will give the students the necessary knowledge about solar photovoltaic energy and hopefully spark their interest in renewable energy. We will continue to support such initiatives and use our experience to create value for the local communities, especially among the younger generation."

Executive Director of GGAF, Ir. Ts. Dr. Mahadi Mohamad, praised Solarpack's decision in his speech. He reiterated, "All partners of the ESP in Malaysia have the opportunity to take their collaboration to greater heights. Even their employees can be part of the programme for community engagement, module development, speaking opportunities, or volunteerism. We want companies to embark on a meaningful ESG journey, especially in the social and environmental pillars.

"The ESP modules and the Office for Climate Education training programmes are developed to reflect the current issues and local context. Ultimately, these references aim

to empower teachers, students, and the surrounding community to learn and practice individual climate action.” He added.

The Green Growth Asia Foundation targets 1000 Eco-Schools to be established in Malaysia by 2025. It needs support from various partners such as the State Education Departments, local authorities, government agencies, universities, and the private sector to realize this goal.

MGTC has supported ESP and GGAF’s efforts by raising awareness through briefing sessions and activities with industry players. CEO of MGTC, Ts. Shamsul Bahar Mohd Nor said, “We catalyse and connect industries with initiatives that will empower businesses to create partnerships for sustainability in reducing their environmental footprint, strengthen their exposure, and improve their operational and financial performance. Echoing the theme of this year's Global Education Day, 'to invest in people, prioritize education’, MGTC believes the ESP will provide a great opportunity for Solarpack to get involved and show their 100% commitment to supporting all activities that will create sustainability awareness to the young generation.”

About Green Growth Asia Foundation
www.greengrowthasia.org

Green Growth Asia Foundation (GGAF) is an independent civil society organisation that provides a platform for leadership, thought, and action in responding to sustainability challenges in Asia. GGAF is taking the lead in promoting a new growth strategy that balances economic development, social inclusivity, and environmental sustainability.

GGAF envisions a resilient low, carbon world built through strong, inclusive & sustainable green growth policies & principles focusing on Asia. GGAF’s vision is to obtain commitment to practicing the concept of Green Growth at all levels – individuals, institutions, investors, and the political leadership. GGAF’s mission is to ensure that Asian countries drive economic opportunity while sustaining natural resources and improving quality of life.

GGAF is achieving its vision and goals through cutting edge 'green growth' strategies, programmes, projects, and activities that drive economic prosperity within a socially inclusive context, underpinned by a strong sense of responsibility towards the environment and advanced through education for sustainable development initiatives. Individual Climate Action underlines all our initiatives, collaborations, and partnerships to achieve our vision.

Solarpack Corporación Tecnológica S.A.U. ("Solarpack") is a multinational company specializing in the development, construction and operation of large-scale solar PV plants in fast-growing markets across Europe, North America, Latin America, Asia and Africa. Solarpack, headquartered in Getxo, Spain, has a diverse geographical footprint and employs over 350 people in 9 countries. Solarpack has been in Malaysia since 2015, through its wholly owned subsidiary Solarpack Asia Sdn Bhd. Solarpack has recently entered into Commercial Operations on 8th March 2022 for its 116MWp solar plant in Sungai Petani, Kedah, developed under Suruhanjaya Tenaga's Large Scale Solar Program Cycle 3 ("LSS3").

Solarpack aims to accelerate the transition toward clean and affordable energy for all, thus helping to create a more inclusive world. The company is committed to contributing directly to the social development of the communities and markets in which it operates, focusing its Social Action Strategy in what the company calls the 3Es of sustainable development: Energy, Education and Employment. Solarpack has been recognised as the fifth most sustainable renewable energy company in the world according to the Sustainalytics ESG Risk Rating.
